

SOFTWARE ENGINEER

Skills

- Programming: Python, JavaScript, Dart, SQL, HTML/CSS
- Backend & Databases: FastAPI, REST APIs, PostgreSQL, SQLAlchemy, .
- Frontend Web & Mobile: JavaScript, HTML/CSS, Flutter, Dart
- Security & QA: Postman, playwright, cypress, API testing, functional testing, boundary testing, Negative testing and edge testing.
- Product & UX: UX Research, Product design & Product management .
- Tools: Git, GitHub, Linux/Ubuntu, VS Code, Figma, adobe photoshop, adobe illustrator.

Professional Summary

Oyoya Oktoy is a software engineer passionate about building innovative, user-centred software solutions that solve real-world problems. She brings a problem-solving mindset, creativity, and a commitment to continuous learning to software development. Through hands-on project experience, she has developed skills in designing, building, and testing software applications, with a focus on creating reliable, practical solutions that improve user experiences and deliver meaningful impact.

Work Experience

Auditerra , Land restoration platform

Auditerra is a digital platform that connects farmers experiencing land degradation with field experts for soil diagnosis and restoration recommendations, including offline data collection for areas with limited internet connectivity.

- Contributed to the development of Auditerra, a digital land restoration and soil diagnostics platform connecting farmers experiencing land degradation with field experts for diagnosis and restoration recommendations.
- Developed backend REST APIs using FastAPI to support communication between platform components and facilitate efficient data processing.
- Designed and implemented API endpoints for core platform functionalities, ensuring reliable backend operations and integration readiness.
- Designed and managed relational database structures using PostgreSQL and SQLAlchemy ORM to support platform data management.
- Built and tested API endpoints using Swagger UI and Postman to validate request handling, response accuracy, and system functionality.
- Contributed to system architecture and technical documentation, translating user requirements into structured software components and workflows.
- Designed user interfaces based on UX/UI principles to improve usability and support the needs of farmers and field experts.
- Developed a Flutter mobile screen for field experts to capture soil diagnostics and land information, incorporating offline capabilities for field use.
- Applied quality assurance practices to identify functional issues, validate API behaviour, and improve the reliability of backend components.
- Collaborated on designing workflows for farmer registration, land degradation reporting, expert assignment, and the delivery of restoration recommendations.

MNS Point of Sale

MNS is a supermarket management system that streamlines sales processing, customer and product records, inventory management, payment processing, and receipt generation.

- Developed a relational REST API for a supermarket supporting customers and streamlining receipts processing automating payment services.
- Designed PostgreSQL database relationships using SQLAlchemy ORM and foreign keys to maintain relationships between interconnected business entities.
- Implemented CRUD operations under Mama Ngina POS to simplify and organise the backend flow following secure code standards ensuring seamless system structure cutting manual errors and keeping inventory and sales data accurate and trustworthy.
- Tested API endpoints using Postman and Swagger and validated database operations, leveraging Quality assurance skills to verify system functionality outputting a fully functional system.
